

For over 60 years, HOMA submersible pumps have been serving the needs of municipal and industrial wastewater customers throughout the world. HOMA began as a submersible motor manufacturer and expanded into full pump production in the 1960's. This evolution has provided end users with fully integrated and optimized products that are designed as one product rather than an integration of two separate products.

This integrated design and manufacturing capability is one of the key reasons why the HOMA name stands for quality, reliability and economy.

Today HOMA remains a privately owned and operated business offering a comprehensive line of dewatering, effluent and solids handling wastewater pumps which are built to exceed current industry standards. HOMA submersible pumps provide superior hydraulic coverage with reliability and efficiency assured in permanent or portable installations, with Wet Pit or Dry Pit applications, from 10 GPM to over 16,000 GPM and with 1/2 HP to 650 HP.

HOMA submersible pumps can be provided in standard configurations from our extensive inventories, or in special designs or metallurgies to meet your specific applications.

HOMA pumps can also be provided for hazardous area classifications. When hazardous area classifications are required, HOMA pumps are labeled Class I, Group C & D, Div. 1 Explosion Proof, certified to FM Global or ATEX Standards.

HOMA stands behind every product with a generous warranty, extensive spare parts inventory, regional authorized service centers, and factory engineers and technicians who are all dedicated to the support of the entire HOMA product line.

Whether your application requires a residential grinder or effluent pump, or you are handling an industrial process stream or municipal flood control, HOMA will engineer a pumping solution for you.

HOMA Submersible Pumps are proven performers in:

- Collection Systems
- Sewage Lift Stations
- Industrial Wastewater
- Treatment Plants
- Storm Water
- Slurry Handling
- Leachate
- Dewatering
- Manure and Farm Waste
- Food Processing
- Various Industrial Applications

HOMA Products											
Applications	Water, effluent and wastewater applications with solids up to 3". Suitable for commercial, industrial or municipal applications.	Pressure sewer systems and high head applications in municipal, residential, commercial and industrial application where solids reduction is required.	Industrial, commercial and municipal applications where resistance to aggressive chemicals or corrosive conditions is required.	Dewatering and water supply for low water level operation with standard motor cooling jacket.	Municipal collection systems, WTP & WWTP transfer applications private and commercial lift stations pumping raw unscreened sewage.	Municipal collection system, master lift stations and WTP & WWTP transfer applications pumping raw unscreened sewage.	Temporary and emergency applications in municipal collection systems, manholes or for repairs and flood control. For raw unscreened sewage, effluent or water.	High volume water supply, cooling water circulation, storm water and wastewater outflow.	Irrigation systems, high volume, low head water supply, flood control.	Sewage and effluent disposal from sanitary installations below sewer grade.	Packages lift stations for sewage and effluent applications available in a variety of sizes from simplex to triplex arrangement.
Installation	Submersible wet pit mounting on Auto-coupling or foot mounted on sump floor.	Submersible wet pit mounting on Auto-coupling or foot mounted on sump floor.	Submersible wet pit mounting on Auto-coupling or foot mounted on sump floor.	Transportable, temporary or permanent	Submersible wet pit mounting on Auto-coupling or stand mounted on sump floor.	Submersible dry pit mounting on pump stand. Hard piped suction and discharge.	Transportable, temporary or permanent, stand mounted on sump floor	Submerged applications mounted in discharge pipe or tube.	Submerged applications mounted in discharge pipe or tube.	Floor mount units contain pumpage in sealed tanks. Ideal for cottages and underground facilities.	Tanks installed at ground level and pumps are submerged wet pit typically on Auto-coupling system.
